Lab 3: HTML Forms

Following is a medical form. Please create a html form. Basically, your results should look like the following picture:

Instructions

1. Please enter the title as **Medical Form**. Please use tags: `<h1>` , bold, center-align text, font family verdana and font color blue.
2. Your HTML code should pass the validation.
3. The "Reset" button should work. When you click this reset button, it removes all the contents in your HTML form.
4. For the 3X4 table (three row, four cells), the third row only have two cells. Let the second cell of the third row cross three cells. (use colspan attribute)
5. Set the action attribute, for example, action="process.php". We will learn PHP in later classes. The submit button is not supposed to work in this exercise. That is, you will not lose any marks if the submit button does not work.
